iOS Developer

## Description:

As An experienced iOS developer responsible for developing applications for mobile devices powered by Apple's operating system. with a strong understanding of the patterns and practices that revolve around the iOS platform.

## Responsibility:

- responsible for the iOS development and maintenance of applications aimed at a range of devices including mobile phones and iPad tablets.
- Plan, design, develop and test iOS applications.
- working alongside with other engineers and developers working on different layers of the infrastructure.
- Ensure the performance, quality, and responsiveness of applications.
- Collaborate with a team to define, design, and ship new features.
- identify and correct bottlenecks and fix bugs.
- Help maintain code quality, organization, and automatization.

## Career Planning

*During my current contract date, I would like to grow as senior with deep experience in iOS development.*

I'm also really excited to take on more managerial responsibilities during current and next year. and potentially even take the lead on mobile development. I've been lucky enough to work with some amazing managers, and so developing into a great manager myself is something I'm really excited about.
